Thank you for your Catalog request, we are providing the enclosed ordering information for your use. These sheets contain current prices and new catalog numbers for all products. Upon request, ICM will forward detailed specifications on those items not fully described in the enclosed sheets.

Inquires may be addressed to:

ICM CUSTOMER SERVICE
P.O. BOX 32497
OKLAHOMA CITY, OK 73132

All ICM crystal Catalog Numbers are made up of six digits. The "40" series of numbers (41xxxx thru 49xxxx) are composite numbers with each digit indicating some specification of the crystal unit (range, holder type, load capacitance, etc.). These catalog numbers are used to order a crystal unit of specifications selected by the user, and the ordering procedure is fully described in the Catalog Sheets. When using the "40" series of numbers, you need to specify the CRYSTAL FREQUENCY only.

Crystal Catalog Numbers other than the "40" series are used to order crystal units for specific commercial two-way equipment where the characteristics of the unit are unknown. Each of these catalog numbers refers to a specific crystal type and its specific application for use in commercial two-way equipment. When you submit an order using these numbers, the need for listing all of the specification data is eliminated, since this information is stored and accessed by use of this catalog number. Also, when using these numbers, you need to specify the CHANNEL (OPERATING) frequency only. ICM will supply the correct Catalog Number for ordering specific two-way equipment units. If you will send us a list of your equipment, we will forward the matching Catalog Numbers for replacement crystals. Catalog numbers will also be printed on shipment enclosures and can be kept for reference in future orders for specific equipment.
